

**G**reat Eastern Metal Products has been serving the electronics industry for more than forty years. Having grown up with the industry, we are constantly developing new products and improving our methods to better serve you:

Blind inserts with revolutionary new styling... MIL-T-27B standard and non-standard fabricated cans and covers...chassis and drawn cans up to 3 inches deep... improved single-end and double-end weld screws in both carbon and stainless steels...new brackets...a complete line of compression-type conventional terminals...Teflon turret terminals...the list continues to grow.

Take advantage of our complete package. Order our cans with headers or terminals installed... mounting studs or inserts welded or silver-soldered in place...seams soldered...and other modifications that you may require.

Standard and non-standard, internal or external mounting brackets or channels are supplied separately, welded, or brazed to cans or covers. The tools and dies are precision-made for precision results. They are scrupulously inspected and meet MIL-T-27B specifications.

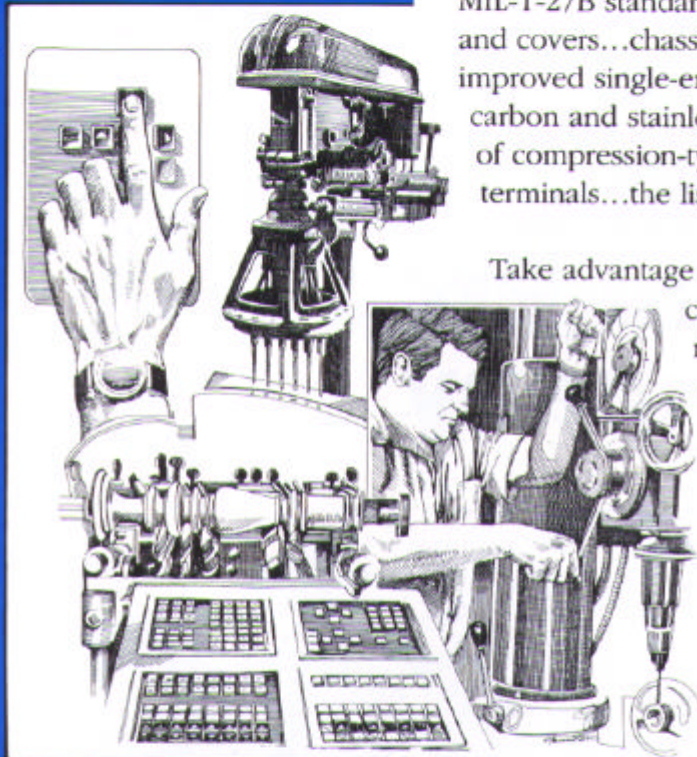

Our assembly department has been doing quality soft-soldering since the company's inception. This same quality applies to silver-soldering. By taking advantage of Heliarc welding, there is no longer any need for soldering of seams. We are equipped to accomplish any brazing required.

We custom-build to meet your specifications, including close tolerances. Do you have a rush job? We'll set up an emergency shift. Just tell us what you want, and when you want it—we'll deliver on time. We're proud of our reputation as a quality vendor. Your inquiry will receive prompt attention.
